### **What's new in WW2: Bunker Simulator:**

**- Ammunition, Supply, Loading Hands-On Room for Longevity**

**While our focus here has been on WW2 the premise of the game can be applied as much to WWII in Africa, the Middle East, the Eastern Front, the Pacific, as it can to modern combat. What exactly is Blitzkrieg 2? It is an extensive package of tools built to help the player understand and replicate the logistics operations and attacks of the Wehrmacht. Here is the rundown: The most important tool is the LUF management and training system. It includes the requirement input from the player as to how many people to assign to each job, what arms and equipment they will use, what skills they will have and other questions about their characters. Essentially you start with a situation, hand it over to the management system and when it is all resolved it outputs a draft of the company. You then make changes (and in the case of the training system this is done along the company's path. You can assign new soldiers to jobs; add new jobs; only assign people to jobs they have skills for; remove people who were assigned to jobs they are no longer willing to do; remove skills a soldier was assigned to but was removed from the company for saying his skill was being sought elsewhere; remove someone for a fictional reason, capture someone and add them to your legion; remove someone from the legion for a fictional reason; stop the training system; add a half-page of comments to your soldiers; dispose of copies of your applicants when they have advanced enough in their training to produce useful recruits (you can forward unskilled applicants to other companies) or remove them from the company for being lazy, and just about anything you can think of. Some of the functions also have a manual counterpart which is fairly straight forward. Some are more tailored to training soldiers and setting level standards (skills**

required for certain tasks) while others are geared more toward shipbuilding rules. Although not its focus the inventory system can be used to create a wartime economy for the company. Now the management system, along with its required input and results, is by far the most unique component of this game. As with other management systems this lets us break a play-through down into as much information as we can write about and never worry about filling space. There is a bit of a learning curve to understand the hierarchy within the system to the point that we may have to explain how things work. A learning curve that is, fortunately, minusc
