The Winnipeg Jets are the first team to record consecutive regulation losses in the 2017-18 season. The loss was only the second time that Winnipeg lost back-to-back games this season. Bryan Little, who entered Thursday's game with a career-high nine goals on the season, opened the scoring 11:05 into the game, with his third goal of the season. Little's first goal came on a powerplay situation. He jumped on a loose puck in the high slot and slid a shot over Mike Smith's left shoulder to give the Jets the 1-0 lead. The Jets added to their lead on the powerplay, as they outshot the Flames in the middle frame, 10-8. Patrik Laine scored the second Jets goal of the night at 9:58. Laine's shot from the top of the faceoff circle found its way past Smith. Cam Talbot made 27 saves, while Smith finished with 28 saves for the Flames. Josh Morrissey ended the Jets' shutout drought at 21:45, giving the Jets the 4-1 lead. Morrissey's goal was the fourth of the year and second of the season for the 27-year-old rookie. Early in the third period, the Jets attempted to kill off a penalty that was over four minutes in length. However, the Jets were unable to kill the penalty and failed on six out of eight shots. The Flames then completed a two-goal comeback late in the third period with a pair of goals from Micheal Ferland and Mark Giordano. The Jets had three shots on goal in the final frame, with the final shot being

Archimedes With Key (Latest)

I first discovered Archimedes at a short-film festival in Brighton last October. On that day, the event was organised in the upstairs part of a building in Brighton's main station. When I arrived, the door was open and I entered the building, with its small entrance hall and the staircase leading to the upstairs cinema. The atmosphere was that of a lively academic institution. There was a small group of people sat around, waiting for the second screening of a short-film by Frédéric Forestier (French actor and director), while the last of the film was showing on the main screen. That film was Archimedes. The first screening had been well-received and there were more people than had anticipated for this second showing. We were joined by a second filmmaker for that showing, called Paul Logan. I am not entirely sure of how it was that we ended up going with him, but we ended up sitting in the front row, a few people behind us, and at the back. It is pretty hard to imagine that in this environment, a film can have a visceral effect on you. However, Archimedes got to me. This piece of film is about a few months ago, and is part of a series of short-films by Toubib Benmahmoud and Karel Kallik, each one about a specific memory from the filmmaker's past. The director of Archimedes is Hany Abu-Assad, a Lebanese artist who, in the previous few years has become one of the most acclaimed experimental and avant-garde filmmakers of the Arab world. It is a good example of a situation where you meet a brilliant mind from another country who has worked for a while in Europe. In our case, this was our second acquaintance with Abu-Assad, since he was an actor in Kill List. Wherever he was born, he was brought up with the full range of Syrian history. His father was a Kurd and his mother a Christian. His career in film is all about bringing to life these pieces of history that were left out of Syria's war-time history. The one thing he has in common with many directors is that he is not interested in using one form of storytelling or the other. Archimedes is a virtual amalgamation of video art and animation. He weaves these short-films into an evocative and powerful whole by changing perspectives of narrative. At times it

What's new in Archimedes:

Archimedes (; ; ; ;), also known by his native Greek name Archimedes of Syracuse (Greek:), was an Ancient Greek mathematician, physicist, engineer, inventor, astronomer, and philosopher of Syracuse (in today's Italy). He was the most accomplished physicist, engineer, and mathematician of ancient Greece, inventing number theoretical tools, mechanical devices, and mathematical theories. His most famous works include the geometrical explanation of the motion of the heavenly bodies, and his death is regarded as a major intellectual event. The most celebrated of his inventions was the method of exhaustion, one of the very first known concepts of calculation by contradiction, and this led to the realization of various infinitesimal values. The second most frequently attested Archimedean work is the method of exhaustion of a given area in a circular crown, which was recognized as such long after his death, and he is often represented holding its token, the circular belt. Archimedes is also credited with the second known solution of the tiling problem, which was later developed by Leonardo Pisano di Montefeltro in his monumental work *De fractura quadraturae*. Nothing is known of Archimedes' early life, leaving his biographical information ambiguous, but by the time he was about sixteen years old, he was admitted into the Platonic Academy, and maintained there until his thirtieth year. He remained at the Academy until he completed his education in mathematics and physics, and left Syracuse around 250 BC, about the same time Pythagoras left Crotona. When he left the Academy his position was filios of calculation, which he occupied after leaving Syracuse, for about fifty years. From the age of 16 to 33 (250 - 217 BC) Archimedes is usually regarded as foremost in both mathematics and physics in his city, and sometime c. 220 BC he became the leading mathematician of the world. He also made advances in engineering and may have had a military role. During his life he made claims of several astronomical instruments and probably employed an assistant. Archimedes is also considered to

be the founder of the method of exhaustion, and he is the only ancient Greek mathematician that it named after him. In 1947, James Rennie proposed that all of Archimedes' works referred to the First World War. Biography Little is known about Archimedes' life, and when he died he was probably 60 years old. Early life Archim
